

SHOOTERS FISHERS and FARMERS Tasmania

29th April 2021.

Dear Miles,

We support the creation of a Technical Advisory Council (TAC) comprising representations of the Australian motoring communities and automotive aftermarket industries, to help guide safe, practical and affordable legislative change for modifying in-service motor vehicles. We acknowledge the TTA changes proposed by ARMA are not intended to undermine the safety or integrity of any state transport authority or general public, rather it allows fully engineered modifications to be undertaken by certified auto-mechanical engineers, using a variety of current Australian design and modification standards, which they are qualified to implement. We don't believe it's appropriate that modifications can be undertaken safely and legally on brand new vehicles using the ADRs, however the same modifications would be classified as unsafe and illegal by state modification standards, if the vehicle is registered prior to adding the exact same modifications to the exact same vehicle make and model.

SFF Tas fully supports the TTA campaign, including, but not limited to:

- Acknowledge disparity in vehicle modification standards and processes across all state and territory jurisdictions;
- Position the National Code of Practice (NCOP) as reference guides for un-certified / un-engineered vehicle modifications;
- Introduce an engineering and certification program where Australian Chartered Professional Engineers (CPE) are empowered, responsible, and able to freely undertake vehicle modifications based on sound Australian Standards and engineering principles (similar to schemes in NSW and SA), using the Australian Design Rules (ADRs);

Allow all Second Stage Manufacturing (SSM) modifications approved under federal ADRs to be automatically approved and accepted under state modification standards for current in-service vehicles (same modifications for same vehicles);

- Recognise interstate modifications for registration transfers, or currently registered Western Australian vehicles, were the modifications are undertaken by a CPE from interstate, and an appropriate engineering report is provided;
- Commit to regular reviews of restrictive regulations, standards and red tape, where clear modification and certification details are already provided within the Australian Design Rules, equivalent international standards, or where there is lack of evidence to prove modifications are unsafe;
- Establish a Technical Advisory Committee (TAC) from motoring community and industry groups, to review, advise and approve requirements for department of transport enactment;
- Coordinate a meeting between the Transport Minister and Western Australian motoring community with the focus to review and overhaul the special interest vehicle concession scheme and the restrictions placed vehicle usage;
- Provide 90 days of general road use each year for special interest vehicle registration, outside of organised club events and maintenance;
- Work with motoring community and industry groups to generate education programs to cover safe modifications and driving in non-standard conditions, such as sand driving, towing caravans, undertaking vehicle recoveries;

- Engage other Council of Australian Governments (COAG) representatives and seek to harmonise vehicle standards and regulations where possible, through the Australian Motor Vehicle Certification Board (AMVCB);
- Agree to transfer responsibility of vehicle modifications regulations and standards to the Commonwealth (or a national regulator), on the condition that:
Moving to a Federal model does not negatively reduce, restrict, or prohibit those provided by the state, and committed above.

Thank you for continuing to engage SFF TAS in this campaign, we look forward to working on this initiative, for the wider Australian motoring communities and automotive aftermarket industries.

Regards,

Lorraine Bennett

Chair
